

What is the average cost for garden, junction, and quarry model train railways?

I have been thinking about getting three different types of model train railways: garden, junction, and quarry railways. I plan to make each one of them at least 25 X 15 feet each. I will have 5-10 trains running on each one, and they are all about \$45-\$120 each (the trains.) I will be buying about \$650 dollars worth of scenery, buildings, tracks, and accessories for each railway. So how much would be my average for each one?
