World's Smallest Working Model Train Layout

This is a Z scale model of an N scale train layout--a model of a model. And it works. I built it to sit in the window of a Z scale hobby shop on my "real" train layout, the James River Branch. (By the way, it's about one-third the size of the last one I made.) You can read how it was built here: jamesriverbranch.net The model has been rephotographed in HD. See www.youtube.com

You can also find this article published on [World's Smallest Working Model Train Layout](#), and on the tag pages [layout](#), [model](#), [Smallest](#), [Train](#), [Working](#), [World's](#).
